                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 gene This sequence is unfinished. It consists of 48 contiss for which the order is not known; their order in this record architectury. In some cases, the exact lengths of the gaps between the contiss are also unknown; these gaps are presented as runs of M as a convenience only. When sequencing is complete, the sequence data presented in this record will be replaced by a single finished sequence with the same according in mapper. In 1048; config of 1048 pt in length

```
coil polymerase III holo:ensyme - used to make man-made ensyme of 5 or of shiouts, useful for long other.

The shiouts, useful for long other.

This is the nucleotide sequence encoding the delta subunit of the E. coil man polymerase III holostype. The sequence was isolated from a lambda place library using probes based on the sequence was isolated from a lambda place library using probes based on the sequence of the trypit opeptides for a lambda place. Coil polymerase III subunite (theta, chi, psi, delta and delta' (17911): 17915. The sequence of the trypit of the sequence of the suppression of the sequence of the trypit of the sequence of the suppression of the sequence of the sequence of the suppression of the sequence of the suppression of the sequence of the sequence of the suppression of the sequence of the sequenc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      RESULT 3

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               caryle; Page 15-16; 115pp; English.
The sequence is that of the DNA polymerase III holoensyme delta subunit hola gene.
Sequence 102 Bp; 241 A; 262 C; 278 G; 251 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Ouery Match 1.54; Score 17, DB 36; Length 1032; Best Local Similarity 100:04; Pred No. 3:85+00; Metals 17; Conservative 0; Mismatches 0; Indels 0;

The sequence does not have a promoter sequence and function. The sequence does not have a source of coding sequences sequence and sequence of coding sequences are sequenced and sequence of coding sequences are sequenced and sequences are sequenced to the article sequence of the sequenc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Subb; Woshlat molecule for preparation of male sterile plants - used produce stress resistant plants and for increase in seed yield produce stress resistant plants and for increase in seed yield transmit (1986); is provided of microspose specific clone Li6, increased from a Brassica napus genomic library. A 2.4 kb Bamil symmet Li6 conts, the coding region was added in antisesse martial entry of promoter joined to nos ter. The resulting vector, PALI305, was 8 promoter joined to nos ter. The resulting vector, PALI305, was character joined to nos ter. The resulting vector, PALI305, was a marked to the antisense gene died, while those that marked to the antisense gene died, while those that marked to the antisense gene died, while those that marked to be regulate the expression of poline-specific to regulate the expression of poline-specific
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match 1.7%; Score 19; DB 1; Length 3293;

Per nucleic acid which alters flower morphology - by suppressing.

Testal and estamonists of converts them to other organs, partic.

Disclosure. Stanson 19 into overts them to other organs, partic.

Michora pecific and plants less awareptible to insect pears.

A filter pecific and plants as included from the genome of petunist which are pecifical and plants as included from the genome of the period of the specific and the gene has the features of a transcription factor and bythids that gene has the features of a transcription factor and control of the gene plants of the features of a transcription factor and control of the gene plants of the features of the features of a transcription factor and are supplicated. Plants transformed with the gene are less a specifically accument plants are protected against Franklinials of perfect metals but the method one be used for other, ep.

Sectionally administrative to have appointed plants. The plants are protected against Pranklinials confidentials but the method one bused for other, ep.

Satisfactive to charge and seed protected against Pranklinials are protected against the secondary fund.

Satisfactive to be accordary fund.

Satisfactive to secondary fund in the plants are also less may concern the period of the 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   RESULT 18
TO 144(177)
TO 144(1
New nucleic acid which alters flower morphology - by suppressing petals and stamen(s), or converts them to other organs, partic. to produce transgenic plants less susceptible to insect pests
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match 14%, Score 16; DB 9; Length 960; Best Local Similarity 100:0%; Pred. Manmalian Tipmphocyte receptor sub-unit - with structure derived using cDNR tlones derived from functional murine cytotoxic Tipmphocyte clone. Disclosure: if 40: 15pp: Edglish. The sequence encodes the V.V., and C. regions and the transmembrane and cytoplassic domains of the alpha subunit of the T cell receptor (TRE)

industrial production of 2,5-di:hydroxy:pyridine
industrial production of 2,5-di:hydroxy:pyridine
This sequence encodes 6:hydroxy:hydriac monoxygenase (6-HRANO) isolated
from Seudomona fluorecenter acrain The The DNA an host cella
fransformed with it, are used to produce 6-TRANO. 6-HRANO is used for the
dequence alto psp. 35,5 dihydroxypytidine.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  //ttg= k //oce 'represents the letter O'misc_difference 170 (RRI) gene. The gene, its product, probes and antibodicat to its product can be used in hybridiantion and immunological seasys to screen for the presence of a normal or defective Mil gene or gene product. Functional assays to mesawer levels of gene function can also be used for disgonis or to monitor treatment. Patient thereapy through supplementation with the normal MI product which can be produced by recombinant techniques is also possible. In addition the disease may be cured on the product of the disease may be cured on the product of t

This primer is used to synthesise the 3' end of the human col III gene
by PRR amplification. This is used in the construction of recombinant
concerns containing collagen genes. A novel method for producing a
proposition polypeptide compress culturaling a host real; where the bost
cent has been infected. It ransferred or transformed with a first
expression vector comprising a polyunciedtide miserial having a nucleic
expression vector comprising a polyunciedtide miserial having a nucleic
expression vector comprising a polyunciedtide miserial having a nucleic
expression vector comprising a polyunciedtide miserial having a nucleic
expression vector comprising a polyunciedtide miserial having a nucleic
expression vector comprising a polyunciedtide miserial having a nucleic
expression vector comprising a polyunciedtide miserial having a nucleic
expression vector comprising a polyunciedtide miserial having a nucleic
expression vector comprising a polyunciedtide miserial partition in the confidence
expression vector compression with method provides for the purchases of correctly fold
expression that the moment light while the moment light while the compression
expression of proconlagena and collagens and collagens and collagens and expression of the
better of proconlagena and collagens in the server. 888888888888888888888

of year 1941;195(1) sobbe for detecting human DNA having adjoint continuous for the man sigh mattalite locus or a construct detection the mitochondrial genome constructed sequence. The mitochondrial genome claim is, page 18, 27pp; Empiliah genome claim is, page 18, 27pp; Empiliah genome claim in the 2.7 kilohase DIZL locus, a highly repetitive sequence. The use of probes complementary to a highly repetitive sequence. The use of sequence provided high detection sensitivity and specificity. The section special and used in sethods to quantitate the amount of DNA in a sample. See Q6537-51.

mis sequence represents the CDNs encoding bories epithalial lingual unthalcropial, poptide. (LAP). LDP is a member of the beta-defeating group for the defeatin family of peptides. LDP has bond spectrum antisationabla scrivity, sequence from yopitides and forms negative bacterist, and fungal happopers. LDP is present to low levels in manualian epithalia, with happopers in the species of the control of the second of descripting injury/infection. This sequence can be used in a method, addistrighting injury. The species of LaP. In this method, epithalial cells are chultured in the presence of a test substance. The levels of LAP mann action is no way of the species of the plant and the measured to defearing whether the substance is an up-regulator. The is used to treat microbial infections of the epithalium (or of those that stand to deeper issues) e.g. in Immunodeficiant extee (AlDS), systic forms, our disease, sounds, principle of the second presence of the species.

Claim 47; Page 79; 133pp; English.

The sequences given in 031312-14 extragements of the interceillular adhesion molecule-3 (ICM-3) gene. ICMM-3 is involved in the process by which pepulations of Leukooyres recognise and adher to cellular substrates. ICMM-3 mediates ocillular interactions with other lymphocyres. macrophages and neutrophile at the site of inflammation sequence. 153 BP; 76 A).

Teatact to Mr.-1 worker as non-hepatitis C virus-1 nucleotide sequence comparishing a non-hepatitis C virus-1 nucleotide sequence comparishing and as a vaccine of the corp.

Transcet to Mr.-1, useful for transing and detecting Mry-1 infections and as a vaccine of the corp.

Transcet to Mry-1 sequence which corresponds to a nucleotide of the sequence which corresponds to a nucleotide of the sequence which corp.

The sequence for the MRY-1 sequence which of the sequence of the proposition and the MRY-1 of sequence of the proposition nucleotide of the proposition nucleotide of the sequence of the transmission of mry genes a product of the proposition nucleotide of the sequence of the transmission of mry genes a produce and the transmission of mry genes a produce an end of the transmission of mry genes and the produce antibodies to detect the seture of the transmission of mry and to produce antibodies to detect the sequence 340 MP; 75 A; 97 C; 104 G; 64 T;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         different mRNAs in the particular tissue from which it was derived. The appearance frequency of a given 65 in a cDNA library can be determined (esp. using primers and probes derived from the GS sequences) as a means of disponeing abnormal cell function or for recognising different cell types. 75 c. 101 G; 138 7;                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        RESULT 121

1274450 standard: CDNA to mRNA, 422 BP.

127450 standard: CDNA to mesenger RNA mRNA; relative abundance; frequency; NR muna: Clouding mepsings non-bilated library; diagnosis detection; NR mana: CDNA to meet 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ctain 1. A single extranded DN (or its complementary strand or the corresp. double extranded DN (or its complementary strand or the corresp. double extranded DN, which comprises one of the 7817 '63' sequences given in Tisolor-T68817 and which is able to hybridate to part of human genomic DNA, cDNA or RRNA is claimed. The GS (Gene Signature) human ground to DNA, por RNNA is claimed. The GS (Gene Signature) as equences were obtained from 'victured CNDNA was initiated from the from which you want poly(7) as the sole primer. Since the 3' unitrandlated sequence is unique to a particular RNNA species, almost all the 3'-related CNDNA bybriddes with specific RNNA species, almost all the 1'-related CNDNA bybriddes with specific RNNA species, almost 1s constructed so as to reflect accurately the relative abundance of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Propagation procedure - obtd. using recombinant DRN and used form some components. The procedure of Commerton. The procedure of the Commerton of Commerton. The procedure of the Commerton of Commerton. The Sequence is also used to screen a human genomic library to homologue to the Dovine factor. The procedure factor which is significantly homologue to the Dovine factor. The Commerton of Commerton of Commerton. The Sequence will be set in 18 pt. 18
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match 1.3%; Score 14; DB 1; Length 413; Dest Local Similarity 100:04; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 (see also 1881s) for the P28 nation (WHSB1S) of Paxoplasms gondii. ```
hyperidic acid encoding Taxonama, sondid FPB procean - used in hyperidican seasors for diggoes, mocroplessors, also for a control parameter, also for diggoes, mocroplessors, also for claim 14: Column 19: 20; 14pp; English, and disposet, respect to claim 14: Column 19: 20; 14pp; English, and the non-poset sequence encoding the boxoplesma gondii pPB procesin. The sequence was obtained from a library generated from nucleic soid abouted from 7: gondii therbycates. Figure 1 hyperidiation tests for direct decention of 1; gondii infection 1 process in hyperidiation tests for direct decention of 1; gondii infection disposate (Hamusosasy) compositions for detection of anti-T; gondii antibodies. Antigence peptides from the p28 process on be used to raise subdiages. Antigence peptides from the p28 process on be used to raise subdiages.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1 105513139-7 //Doce - Cigin 11.

This sequence represents the DNA encoding a transcription controlling
factor of the investion, designated 750. The transcription controlling
factor in Tree promotes transcription of the RBZ1 gene. Use of the
remortpicion factor enables rice to be improved in quality and quantity.

Case Tables (19-110) 134pp; English.

A cDN, Library was pepared in lembda gilo. from make sloaded from a south bowine owary. Plaques were accessed using a mixture of probes encoding portion EAA, EBB and EXC processes. Postitive closes were analysed further by Southern hybridisation using the postine probes and closes encoding bowine EPA, EPB and ENC proteins were identified (see Geoffa)-06661, respectively).

Sequence 1029 BP; 250 A; 288 C; 235 G; 255 T;

 The alfalfa and make CCR genes can be used to transform plants only active cells to creeke transgenic plants in which lighth biosymhesis is required so that lighth content is higher or lower than in normal plants. PERS-1997 (first entry)

RASP-11 regeneration gene up-regulated in regenerating liver.

RASP-11 regeneration-associated scriptn 1: liver: othrhosis;

Repetons: transgenic animal; disgnosis; gene therapy; ss.

Rome sapiens. LocationQualifiers

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             To state transcriptional regulatory element - for directing expression of your specifically in cells of endothelial lineage appearance for the state of the specifically of the specifically of the specifically desired from house strain CD-1 embryons of sequence discovered from house (tek) of sequence R48627 hat is expressed duting mouse exclusioners, an additional ORM strain of 35659 and encoding procein R48638, was isolated A cDNA close (T18889) codes for the delta subbuilt (R97399) of the human child.

A cDNA close (T18889) codes for the delta subbuilt (R97399) of the human child.

DNA using a probe generated from human hippocampus constructed from the brain cDNA using primars (see also T18996-9); based on the rat delta sequence. The cDNA can be incomposited into a vector and used to direct expression of the coll and a reput construction of the coll and                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     WRT 96-412739/41.

tuneful for mercening potential.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         RESULT 266

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            an alleayy treatment (Claim) to Page 51, 8799; English.

A cDMA close (73390) Codes for novel human G-protein coupled receptor (73390) Codes for novel human G-protein coupled receptor GPM1 (MGC444). It was discovered in a cDMA library derived from a human 9-Yk embryo. It may also be lacatted from the human breast. cDMA clones for GPM1, GPM2, GPM3 and GPM4 (see also 73390) CSS can be willised in the produ. of receptorisms G-protein coupled receptors (see also WG4454-7) in e.g. E. coll, CGS or insect cell hosts. The control of mutations in GPM genes that may lead to tumours and cancers, or utilised in GPM genes that may lead to tumours and sequence 1713 BPP in 395 A; 460 C; 335 G; 496 T;
